

Roof Vaults and National Styles

Early 20th Century

The German approach: analysis and geometry

The Italian approach: ribs, coffers, and buttresses

The "Spanish" approach: double curvature and thinness

Concrete shells and stiffness

Economy of labor vs. efficiency of materials

Complexity of analysis vs. complexity of form

German Tradition

Firm of Dycherhoff and Widmann

F. Dischinger (1887-1953)

U. Finsterwalder (1897-1988)

A. Tedesko (1903-1994)

Longest Spanning Domes in the World

Date	Place	Span (m)	Rise (m)	Weight (metric ton)
1590	Rome	42	21	10,000
1913	Breslau Wroclaw Poland	67	16	6,340
1929	Leipzig	76	17.5	2,160

Centennial Hall Wrocław Poland

Longest Spanning Domes in the World

Date	Place	Span (m)	Rise (m)	Weight (metric ton)
1590	Rome	42	21	10,000
1913	Breslau	67	16	6,340
	Wrocław Poland			
1929	Leipzig	76	17.5	2,160

F

$$R_y^2 \left(\frac{\partial^2}{\partial x^2} + \frac{\partial^2}{R_y^2 \partial \phi^2} \right)^4 w + \frac{12}{h^2} \frac{\partial^4 w}{\partial x^4} = f(p_x, p_y, p_z)$$

$$\frac{du}{dy} = -\alpha_y \frac{\pi}{L} v + \alpha_y \frac{2}{Eh} N_{xy}$$

$$\frac{dM_y}{dy} = -\alpha_y \frac{\pi^2}{L^2} \frac{Eh^3}{6} \theta + \alpha_y S_y$$

$$\frac{dv}{dy} = \alpha_y \frac{W}{R_y} + \alpha_y \frac{N_y}{Eh}$$

$$\frac{dN_y}{dy} = \alpha_y \frac{\pi}{L} N_{xy} + \alpha_y p_y$$

$$\frac{dw}{dy} = \alpha_y \theta$$

$$\frac{dN_{xy}}{dy} = \alpha_y \frac{\pi^2}{L^2} Eh u + \alpha_y p_x$$

$$\frac{d\theta}{dy} = -\alpha_y \frac{12}{Eh^3} M_y$$

$$\frac{dS_y}{dy} = -\alpha_y \frac{N_y}{R_y} + \alpha_y p_z$$

1941

Ribbed barrels by
Anton Tedesko

1948

1D ribs = Stiffness

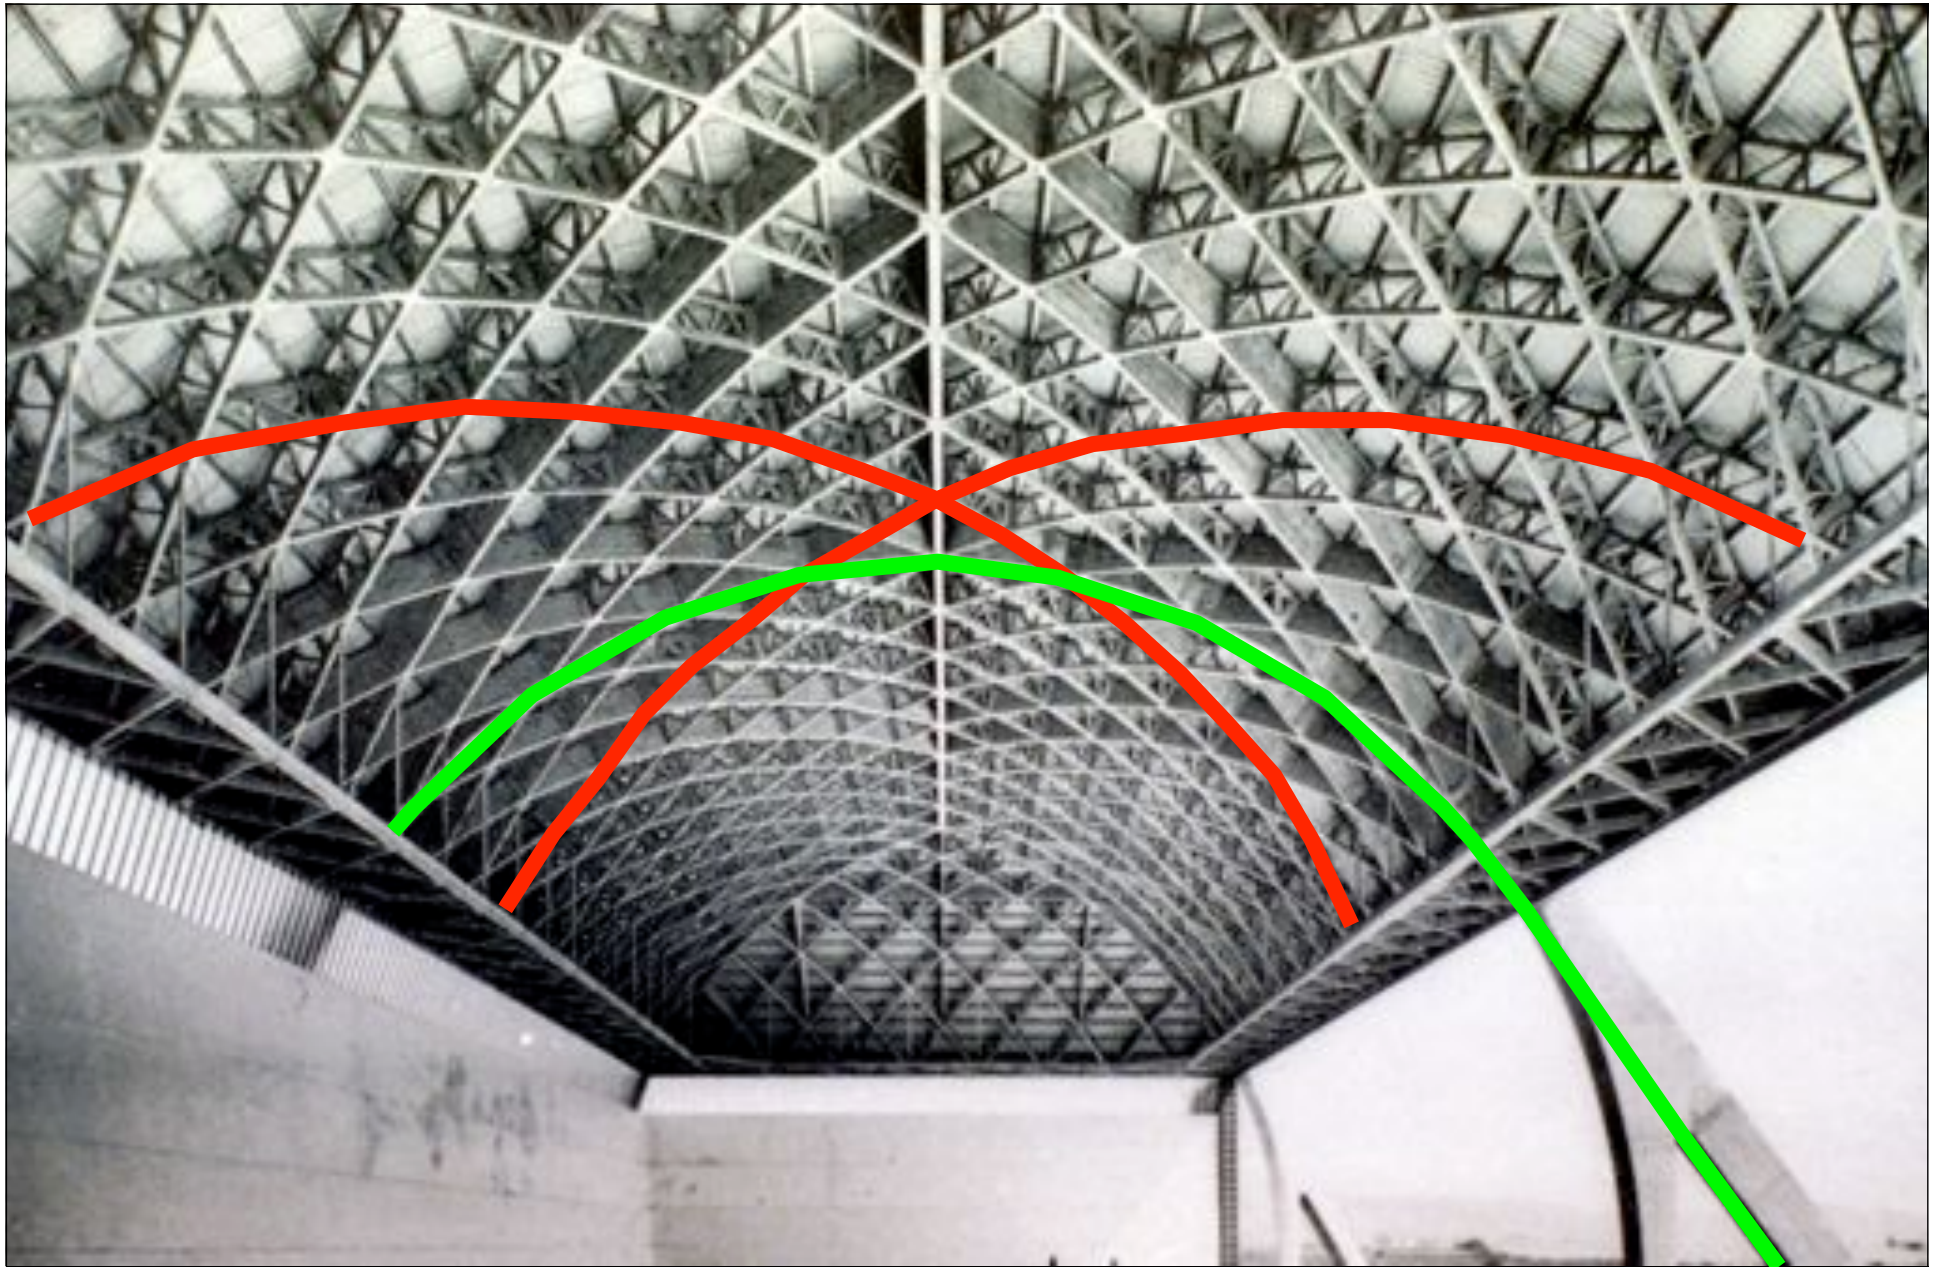

Describe the method used by the German school for finding forms for roof structures.

Why would such an approach be justified for structural engineering?

Why might it be limiting for structural art?

Italian Tradition

P.L. Nervi (1891-1979)

2D ribs = Stiffness

1D rib = Strength

Nervi

Tedesko

Little Sports Palace
1957

Describe the differences in the ribbing in these two Nervi structures. What are the differences in the way domes and barrels carry loads?

failures in translation

structure, not structural art

What makes Nervi's solution so much more elegant?
What are the scientific reasons, if any, for his aesthetic choices?

Spanish Tradition

Catalan influence

A. Gaudi (1852-1926)

E. Torroja (1899-1961)

F. Candela (1910-1997)

E. Dieste (1917-2000)

Sagrada Familia School

Church of the Sagrada Familia
Gaudi, 1882 - present

Church of the Colonia Guell

Zarzuela Hippodrome (1935), Eduardo Torroja

Torroja

Nervi

double curvature = stiffness

Algeciras market hall

Locate the double curvature in this shell
Comment on the aesthetics

Xochimilco restaurant

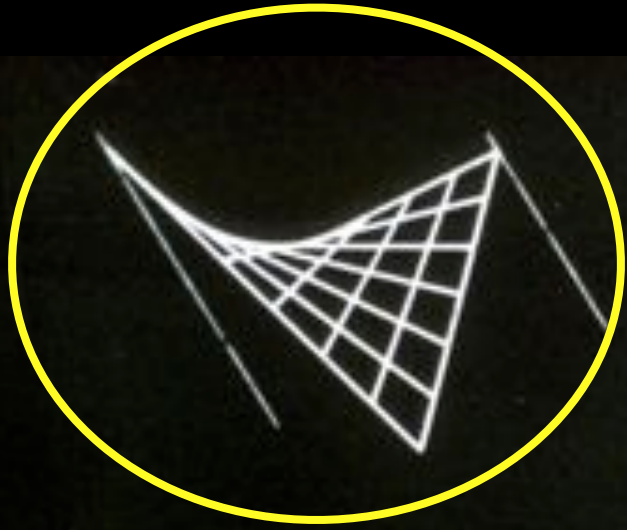

www.structurae.de

Felix Candela

$$z = \frac{y^2}{b^2} - \frac{x^2}{a^2}$$

Describe the different approaches Gaudí (left) and Candela (right) took to form-finding? Did material choice have any effect on their choices?

German tradition

Italian tradition

Spanish tradition

Exam 1 Next Tuesday

1. Study IDs from online index website > exam review (can be printed)
2. Study Tower and the Bridge. This is the core material for questions
3. Study each lecture theme. Practice writing and answering questions based on them
4. No calculation, but quantitative questions and axial force / moment diagrams are fair game

Format: IDs; multiple choice/matching/blanks
